**Suncity School, Gurgaon** has installed air purifiers in all the classrooms and other areas of the school. Air purifiers installed in the school work on ESP (Electro Static Precipitation) technology. The main filter comprises a series of metal plates and an ionizer wire. As the air particles pass through the wire, they become charged and get attracted to the stainless steel collection plates. ESP technology can capture particles smaller than 0.3 microns. The school has also imparted training to the electrical maintenance staff regarding the working of purifiers. Prominent environmentalist Jitender Bhadana welcomed the move. "The move is a small step of our concern towards the health of students," said Rupa Chakravarty, school principal.
